Mission Oriented Design

A Swiss made Helicopter

Medical Evacuation Emergency Medical Services

Make the best out of the golden-hour: land on unprepared surfaces, load the patient from the facilitated, standard rear-access Clamshell doors or through the wide side doors, with 1 or 2 pilots and up to two medical attendants.

The single-volume unobstructed cabin offers large sliding doors that bring great accessibility and practicality.

Not only will the flat-floor design enhance the versatility of your helicopter-ambulance, but a standard built-in vertical reference window will also give the crew a better monitoring of the mission with a direct view onto the ground environment.

The high clearance designed tail-boom will let the ground crew stand underneath and load with ease the stretcher and all of the medical equipment.

With a useful load of 1,300 kg (2,800 lbs), SKYe SH09 will enter the life saving helicopter fleets around the world.

SKYe SH09 for other missions

- ▶ Utility Vertical Take-off Platform
- ▶ External Load Carrying
